

ASG Launches the Bentley Data Centre

The Bentley Data Centre was officially introduced to customers, dignitaries and members of the media on Wednesday 7th September 2011.

The launch offered guided tours of the facility and a reception hosted by ASG CEO Geoff Lewis and the Honourable Christian Porter, Western Australia Treasurer and Attorney General. In his key note address, Christian called ASG “a Western Australian success story” and praised the company’s work with federal and state government agencies.

The facility features two separate data halls totalling 550sqm, provides granular power consumption and was constructed with building efficiency measures to achieve target PUE of 1.5. Within two days of the opening, the facility was audited for compliance with ISO 9001 and ISO 1400. Compliance was confirmed and the Bentley data centre now joins the ranks of ASG’s national branches as certified in these two international standards
